

EL CONOCIMIENTO IMPULSA TUS ALAS

División de Educación de la Fuerza Aérea de Chile

ABSTRACT

Education has evolved from a series of innovations to which the Air Force has not been unaware. For this reason, as a permanent State body, it is involved in the State's established policies of its modernization plan, promoting an internal educational reform. From this perspective, the academies and colleges have the responsibility of providing an education that addresses the various formative areas, so as to prepare officers and non-commissioned officers with a sound military, physical, and intellectual preparation with solid principles and ability to face and solve the problems demanded by their professional performance, with a service and commitment attitude throughout their professional career.
